EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Richard Fagin on November 30, 2007.

The application has been amended as follows:

Claim 1, line 9 shall be amended as follows:

receiving nuclear magnetic resonance signals from the body, wherein the receiving comprises receiving with a substantially uniform spatial sensitivity within the volume; and

Claim 23, line 7 shall be amended as follows:

an antenna for inducing a radio frequency magnetic field within the volume, wherein the antenna is configured to have a substantially constant spatial sensitivity within the volume;

Claim 33 shall be amended as follows:

A nuclear magnetic apparatus, comprising:
a magnet for inducing a static magnetic field within a selected volume;

an antenna for inducing a radio frequency magnetic field within the volume,
wherein the antenna is configured to have a substantially constant spatial
sensitivity within the volume;

means for generating radio frequency power pulses operatively coupled to the
antenna;

means for detecting nuclear magnetic resonance signals from within the volume,
wherein the magnet, the antenna and the means for generating are configured to
provide a maximum size of the selected volume with respect to physical
dimensions of the magnet for a selected accuracy of measurement, wherein the
magnet, the antenna and the means for generating are arranged to induce
substantially uniform nuclear magnetization within the volume; and
means for analyzing composition of a body disposed within the volume.

Claim 34: (Cancelled)

Claim 35 shall be amended as follows:

The apparatus as defined in claim 34 33 wherein the antenna comprises a
longitudinally wound coil having a booster coil at each axial end thereof.
